Now retired, Hannah is as correct and stylish as ever. Full or empty, at home or the showing, Hannah is one of the most beautiful does I have owned. She simply floats as she walks, and is so correct that she is always beautifully set up. Although her udder isn't as capacious as some of our other does, it is very tightly attached, with extremely correct teats and medial. Hannah has high components, wonderful flavor and ease of milking. Hannah now has at least two FS91 daughters. At seven years old, we decided to take Hannah out for the first time in three years. Yeah, she's still had her mojo, with 2xBOB at REDGA, followed by BOB at NWODGA, then 3rd at Nationals! At 11 years old Hannah gave us triplet does, so we felt it was time for her to retire.

Yes, a hot yearling can grow up into a beautiful, productive doe. Obviously, Evianna's a pretty special doe, but what I like the most is how complete she is. She is strong in general appearance, and has an extremely correct udder with a beautiful rear udder. She is a big girl, but has lots of femininity and dairyness. Most important to me is that for all her early awards, she was never overmature, always looking like a young doe with room to grow. As a 4 year old, she freshened with a big healthy set of triplets, had a high test over 16 lbs, and was finally fully mature, with all the depth, angularity and dairyness we were waiting for. Now 9 years old, she is still just as correct and beautiful as she was as a yearling. She has been a solid doe in the milk parlor too, with a 10 lb a day lifetime average, and a Top Ten record to go with her National Champion! We feel Evianna has nothing left to prove, and have retired her.

2-04 188 2161 81 3.8% 62 2.9% proj 3045 112 89

Janica gave us one last doe before leaving. Rosemary is a carbon copy of her, very tall and dairy. Initially a gangly teenager, she has started to fill out and gain some depth to balance her dairyness. Rosemary freshened with a capacious, well attached udder. She looks great and is milking really well. Though we don't show many of the LaManchas, we took her out a few times, where she consistently placed 1st or 2nd, and took home a couple reserves, as well as a BUOB.

ext 495 3999 127 3.2% 130 3.3%

Meryl is a sharp, correct doe with a lot of dairy strength and strong feet and legs. Fresh as a yearling, Meryl was quite awkward and still growing into an extremely tall young doe and milking well, so we milked her through this year. Like our other Presto daughters, Meryl has a correct udder and has milked a steady 8-10 lbs since she freshened as a yearling.

Beezie is an experimental that managed to capture the best of both sides. Tall, angular and dairy from Handyman, with a correct udder and beautiful general appearance from Josie. Like the Handyman daughters, she will be slow to fill out her frame, but is one of our more exciting young does. We took her out to our most competitive club show, where she was 3xGCH, 1xBOB, 1xBUOB and 1xBIS as a first freshener.

'17- 3x1st, 1x2nd
'17 RSGCH, 1st milking yearling- Oregon State Fair

Alex is our fancy girl of the bunch. She has a very correct mammary, with a nice globular shape and long, smooth foreudder. She went through some growth phases this year, but has settled into a deep and nicely balanced young doe. She just keeps getting better, and surprised us with a RSGCH as a yearling at the very competitive Oregon State Fair, with 42 milkers! She's one that I will breed this year, since it is always nice to have a show doe in the barn!

SG TEMPO SILHE 7*M

'17- 1x1st, 2x2nd (to Alex), 3x1st udder

My favorite of the yearlings. Silhe is a hard working yearling milking between 10-12 lbs. She is a very sound young doe in both structure and mammary, and doesn't look like she is milking any more than the other young does. I plan to milk her through this year.

1-5 FS84 +VVV 0-11 287 1685 68 4.0% 63 3.7% proj 1782 72 67

Miryam was a naughty girl and got herself out and bred younger than we wanted. But, with a slightly precocious udder, I let her be. She freshened easily with a cute single doe. She has spent the year growing and milking only modestly. But, she does have the highest components of any doe in the herd. She also has a correct and easy to milk udder, and is filling out now into a well balanced young doe. Can't wait to see what she looks like next year!

Like her dam, it has taken Kiira awhile to grow into herself this year. But, she has maintained a steady 9-10 lb average while growing. She is sound on her feet and legs, and correct throughout. I plan to milk her through this year.

When I first saw the Spotlight Sale catalog, I was intrigued by the production and type scores behind this buck. Then when I saw his length of body, tremendous bone and dairy strength, and super correct feet and legs, I decided he could come work on our dairy. I think his power will be a nice compliment to Vito's dairyness, and am excited to see the two work together. Thank-you Sharon Hittner, and good luck with Karolyta.
